

Supported portable listening devices

You can listen to One-Click™ Audio audiobooks on a wide range of portable listening devices, including portable music players and portable media centers from Apple, Creative Labs, Samsung, Toshiba, and other manufacturers.

For an optimal experience when listening to a One-Click Audio audiobook, it is recommended that you select devices that support features such as bookmarking and full-time stamping, and that have a storage capacity of at least 1 GB, since the average CD-quality eAudiobook file size is 140 MB.

The following list includes players that have been tested by OCLC and are compatible with one or both One-Click Audio audiobook file formats. For players that will provide the best listening experience, look for the preferred device icon. For playback controls, please refer to your player's user manual.

KEY TO DEVICE COMPATIBILITY

Compatible with Media Center

Plays secure WMA files

Plays DRM-free MP3 files

Preferred device

Apple iPhone 3G

Storage: 8–16 GB
